Our summary

The Berkeley-Charleston-Dorchester Council of Governments is seeking a vendor to supply and implement a mobile ticketing and electronic fare collection platform for its regional transit network in coastal South Carolina. The work extends an existing phone-based fare system and reuses onboard validators already installed on CARTA buses, while the new platform must connect with the current trip-planning application. Requirements cover an account-based back office, acceptance of transit smartcards, phone wallets and bank cards, fare capping, links to partner mobility services and human service transportation programs, PCI-compliant security, and open, nonproprietary interfaces built on common data standards such as GTFS. Proposers must show that the core software has run for at least two years at three larger transit agencies, separate near-term roadmap items from unplanned features, name required partners, and complete a cost proposal form. Testing, training, documentation, installation and warranty are also addressed. Responses must be emailed as PDF files before the deadline,...
